#### **EDUCATION**

#### Georgia State University, College of Arts and Science

Atlanta, GA

Bachelor's in Computer Science

Graduated: December 2022

Relevant Coursework: Software Engineering, Database Systems, Data Structure, Design Analysis and Algorithm,

System Level Programming, Computer Org and Programming,

Achievements: Dean's List Fall 2018, Summer 2019, Spring 2020, Summer 2020

### **EXPERIENCE**

Frontdoor, inc.

Remote

Software Engineer Intern

June 2022 - August 2022

- o Using React, onboarded new business partner to existing company website, which was used by 100k+ customers
- o Developed a REST API by designing schema and instances and writing Parsley code in Zesty
- o Extracted features from code base and designed technical architecture documents to help onboard new partners to the website instantly rather than in a week
- o Debugged over 500+ lines of Go code to ensure the backend received expected responses

#### **PROJECTS**

BotTrition November 2021 - December 2021

- o Worked as a group to create a website that allows users to calculate their BMI and search for information about foods and diets
- o Participated in weekly group meetings with a Facebook industry mentor (IM) which involved contributing ideas about user stories, assigning tasks via Kanban boards, acting as a product manager, and updating the IM about the team's progress
- o Using ReactJs, minimized and improved search feature, implemented hide/show feature to organized nutrition details, improved diet select dropdown menu by providing website link for each diet
- o Implemented database structure for user information by using Heroku PostgreSQL and Flask SQLAlchemy
- ${\tt o}\,$  Set up GitHub testing workflow and wrote 2 client tests

MusicWebApp September 2021

- o Built a web application that displays songs from users' favorite artists with lyrics, album art, and an audio preview
- o Used HTML, CSS for frontend and Flask, Heroku PostgreSQL for the backend
- o Utilized Spotify Search API and Genius API to generate songs data dynamically
- ${\tt o}$ Implemented secure user login using Heroku Postgre<br/>SQL and Flask-login
- o Users can dynamically save artist data in Heroku PostgreSQL

Client Portfolio May 2021 - July 2021

- o Created a portfolio website for a client from scratch based on a design on Figma
- o Developed website using HTML, CSS and JavaScript
- o Used JavaScript to create a smooth client testimonial section where users can see client's reviews by clicking an arrow button, as well as made website fun to scroll by applying section reveal animation
- o Used CSS properties such as flexbox, grid, media queries and rem units to make website responsive for all devices
- o Communicated with client effectively to make website friendly to use for all visitors

ToDpApp January 2021 – February 2021

- o Designed and developed an android application called "To-Do App" from scratch using Flutter
- o Acquired skills on using Android studio and familiarized with Dart programming in order to create "To-Do App"
- o Assists users to finish tasks on time and has capability to organize events therefore making users more productive throughout the day
- o Provides a calendar from which users can select any particular days of month to establish daily activities
- o After accomplishing task, users are able to swipe left/right to delete completed task

## **SKILLS**

- o Advance level: React, Java, JavaScript, HTML, CSS, Python flask, PostgreSQL
- o Intermediate level: Unit testing, C++, C, x86 Assembly, Unix, Flutter
- o Tools: Github/Gitlab, Jira, Confluence, Lucid chart, Zesty, Splunk
